

d. 目前的主要代码：

```
1  type Config struct {
2      Global struct {
3          Namespace string `yaml:"namespace"`
4      } `yaml:"global"`
5      Plugins struct {
6          Log struct {
7              Default []struct {
8                  Level string `yaml:"level"`
9              } `yaml:"default"`
10         } `yaml:"log"`
11     } `yaml:"plugins"`
12 }
13
14 func init() {
15     ctx, cancel := context.WithCancel(context.Background())
16     ticker := time.NewTicker(1 * time.Hour) // 每小时触发
17     go func() {
18         defer ticker.Stop()
19         defer cancel()
20         for {
21             select {
22             case <-ticker.C:
23                 log.InfoContext(ctx, "start scan production service")
24                 scan()
25                 log.InfoContext(ctx, "scan production service completed")
26             case <-ctx.Done():
27                 return
28             }
29         }
30     }()
31 }
32
33 func scan() {
```

今日所遇问题：

1、问题：

```
2025-08-07 17:34:24.773 ERROR task/scan.go:77 config parse error: yaml: line 3: mapping values are not allowed in this context, service: fc-feeds-tfra-serving, version: v20250721145718e305ef5-release
2025-08-07 17:34:25.579 ERROR task/scan.go:77 config parse error: yaml: line 2: mapping values are not allowed in this context, service: fc-feeds-tfra-serving, version: v202507211457344605741-release

2025-08-07 17:35:01.346 ERROR task/scan.go:77 config parse error: yaml: unmarshal errors:
  line 2: cannot unmarshal !!str `export ...` into task.Config, service: llmgateway-bench, version: v202507221649052b9624f8-dev
2025-08-07 17:35:02.586 INFO task/scan.go:81 [{} {{{}}}]
2025-08-07 17:35:03.394 ERROR task/scan.go:77 config parse error: yaml: unmarshal errors:
  line 2: cannot unmarshal !!str `export ...` into task.Config, service: llmgateway-bench, version: v20250722164920a9b0ab-release
```

原因：扫描得到的是所有服务挂载的所有配置，因此不一定只有trpc_go.yaml，因此要先过滤出trpc_go.yaml，再进行解析；

2、问题：对于fc-feeds-feature服务用接口扫描的时候漏掉了一个配置文件；

具体原因还在查找；

明日待办：

1. 解决今天的第二个问题；
2. 添加电话告警；
