

20250808日报

今日工作内容

1. 解决昨日遗留问题：当前只能获取到每一个服务的最新挂载的启动配置，而会漏掉某些配置文件；
 - a. 原因：原接口只能访问到最新的配置，无法读取所有配置
/v1/project/sgameai/paas/{service}/configs/startup/configs?searchKey=&pageNow={page}&pageSize=10；
 - b. 解决方案：以开发者模式打开网页，通过观察gdp服务正式服配置的请求url，并按照其接口 格式进行修改：

修改后的接口为：

/v1/project/sgameai/paas/{service}/configs/startup/versions?env=release&configName=%s&searchKey=&pageNow={page}&pageSize=10；

此时得到了所有正式服下的启动配置文件，但是还需要筛选出生效的配置文件，通过观察发现未生效的配置文件的relateConfigmaps=nil，即workload=nil，因此只需要多一步筛选即可；

当前修改后的代码如下：

- getallserviceconfig.go

```
1  const (
2      apiAddr = "http://odpapi.woa.com"
3  )
4
5  // getAuthHeaders 使用OAuth2的客户端凭证模式获取访问令牌
6  func getAuthHeaders() map[string]string {
7      hash := md5.Sum([]byte("3d989c5a-1494-11ed-9b24-d27deb876dd9"))
8      clientSecret := hex.EncodeToString(hash[:])
9      params := url.Values{}
10     params.Add("client_id", "oauth-client-service.sgameai-global")
11     params.Add("client_secret", clientSecret)
12     params.Add("scope", "oauth-client-service.sgameai-global")
13     params.Add("grant_type", "client_credentials")
14     apiURL := apiAddr + "/v1/oauth2/token?" + params.Encode()
15     req, _ := http.NewRequest("GET", apiURL, nil)
16     req.Header.Add("Content-Type", "application/json;charset=UTF-8")
17     resp, err := http.DefaultClient.Do(req)
18     if err != nil {
19         log.Fatal("request failed: ", err)
20     }
21     defer resp.Body.Close()
22     body, _ := io.ReadAll(resp.Body)
23     var result map[string]interface{}
24     json.Unmarshal(body, &result)
25     accessToken := result["access_token"].(string)
26     return map[string]string{
27         "Authorization": "Bearer " + accessToken,
28     }
29 }
30
31 // ListAllServices 获取所有服务列表
32 func ListAllServices() []map[string]interface{} {
33     resultList := []map[string]interface{}{}
```

```
1  type Config struct {
2      Global struct {
3          Namespace string `yaml:"namespace"`
4      } `yaml:"global"`
5      Plugins struct {
6          Log struct {
7              Default []struct {
8                  Level string `yaml:"level"`
9              } `yaml:"default"`
10             } `yaml:"log"`
11         } `yaml:"plugins"`
12     }
13
14     func init() {
15         ctx, cancel := context.WithCancel(context.Background())
16         ticker := time.NewTicker(1 * time.Hour) // 每小时触发
17         go func() {
18             defer ticker.Stop()
19             defer cancel()
20             for {
21                 select {
22                     case <-ticker.C:
23                         log.InfoContext(ctx, "start scan production service")
24                         scan()
25                         log.InfoContext(ctx, "scan production service completed")
26                     case <-ctx.Done():
27                         return
28                 }
29             }
30         }
31
32         func scan() {
33             // 遍历所有正式服部署下的每一个服务，每个服务都执行judgeandreport()
```

c. 部署到gdp后，当前结果为：

```

```

从结果中可以看出，对于有debug级别的启动配置文件（trpc-go-yaml/trpc-python-yaml）会被触发Alert；

此需求目前还剩下电话告警部分，主要开发部分基本完成了；

明日待办：

- 1、完成最后的电话告警部分，并对“线上go+python服务正式环境不允许debug日志级别”需求完成收尾；
- 2、开始研究“pytorch serving”需求；
