

20250821日报

今日工作内容

1. 完成昨日剩下的一点的aov端日志服务告警；

2. 导出王者、HOK、AOV的存量表，并给出对应配置名和配置版本；

```
1 func judgeandreport(writer *bufio.Writer, data string, serviceName string,
  configName string, version string, creator string) bool {
2     var cfg Config
3     if err := yaml.Unmarshal([]byte(data), &cfg); err != nil {
4         log.Errorf(context.Background(), "config parse error: %v, service:
      %s, version: %s",
5             err, serviceName, version)
6         return false
7     }
8     // 检查日志级别配置
9     for _, output := range cfg.Plugins.Log.Default {
10         if isDebugLevel(output.Level) {
11             // 发现debug日志级别配置，触发告警
12             wirtefile(writer, serviceName, configName, version, creator)
13             return true
14         }
15     }
16     return false
17 }
18
19 // 判断是否为debug日志级别，大小写兼容
20 func isDebugLevel(level string) bool {
21     return strings.EqualFold(level, "debug")
22 }
23
24 func wirtefile(writer *bufio.Writer, serviceName string, configName string, version
  string, creator string) {
25     writer.WriteString(serviceName + "\t\t" + configName + "\t\t" + version +
      "\t\t" + creator + "\n") // 只输出有正式服启动配置的服务和创建者
26 }
27 func main() {
28     file, _ := os.Create("service_logs.txt")
29     defer file.Close()
```

导出结果表如下：

1	服务名	配置名	配置版本	负责人	
2	aov-match-process-proxy	trpc-go-yaml	v20250605131839317ab5fa-release	zxyeh

27					

明日待办：

- 1. 研究Torch Server；
